1 Background

This is a web application that will provide the ability for a customer to order some snacks and drinks in the café. It also provided the administrator tools for café owner to enter details of drinks and snacks for sale.

As a customer, you can:

- Order a drink or snack.
- Check what you have ordered.
- Add more drink or snack to your current order.
- Cancel your order for a drink or snack.

As the admin, you can:

- Enter details of drinks or snacks for sale.
- Read details of drinks or snacks.
- Edit details of drinks or snacks for sale.
- Withdraw a drink or snack from sale.
- View all customer's orders.

2 Getting Started

2.1 Guide to running application

The following steps will lead you to run the application:

- 1. Clone the source code from GitHub to Desktop
- 2. Open the project file MyShop.sln

(ISAD251-COURSEWORK > application > MyShop > MyShop.sln)

- 3. On the menu, click Tools > NuGet Package Manager > Package Manager Console
- 4. Enter command update-database
- 5. On the menu, click View > Server Explorer, expand the Data Connections
- 7. Right click on the DefaultConnection > New Query
- 8. Copy all SQL statements from the SQL file

(ISAD251-COURSEWORK > SQL > ISAD251.sql)

- 9. Paste all SQL statements to the New Query tab and execute all SQL statements.
- 10. On the top menu, click Build > Clean Solution
- 11. You can run the application.

YouTube Video for how to run the application:

https://youtu.be/ncrS5tlbLXI

^{*} The web application does not include payments, delivering the order and users management.

2.2 Account

3 Storyboard

1. If this is your first time to visit our website, you can create an account in registration page.

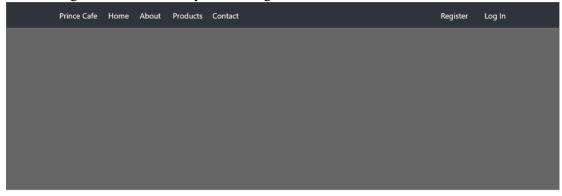

Home / Registration

Registration

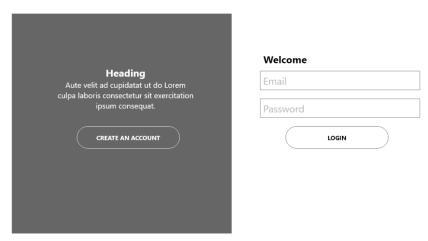

First Name
Last Name
2000 1101110
Email
Phone Number
Password
Confirm Password
REGISTER

2. You can login our website with your existing account.

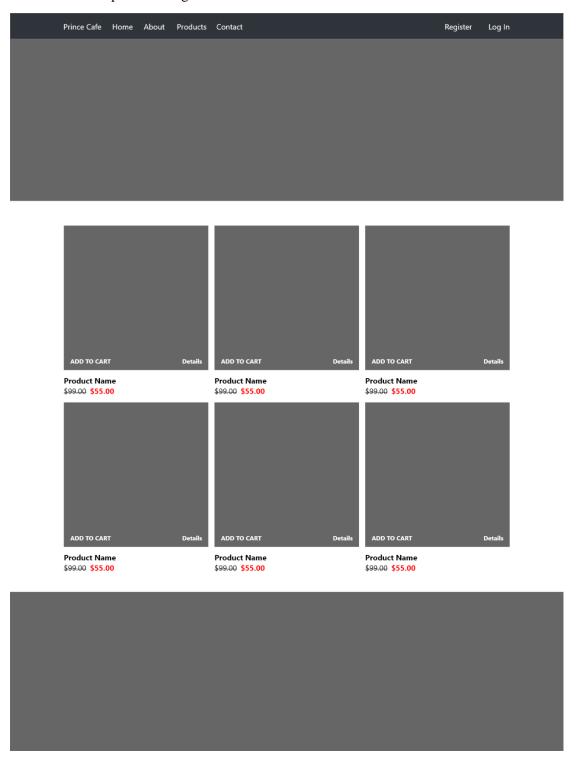

Home / Login

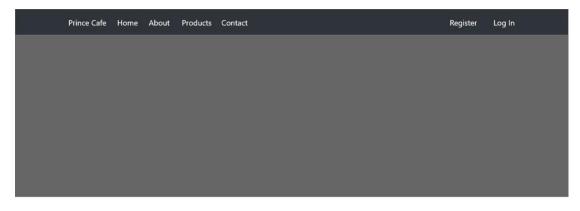

3. After login to our website, you should redirect to our home page. The home page will display six items randomly. You should see "Add to cart" button when your mouse hover on the product image.

4. The product page includes filter and search function. For example, if you click snack or drinks button, the relevant items will be shown in below section. If you enter any keyword into the search box, the relevant items will be shown in below section.

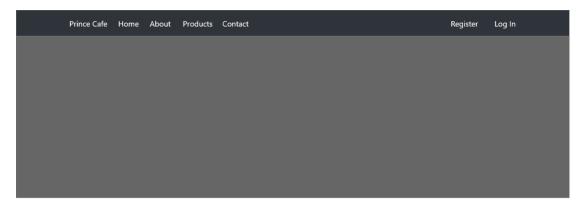

Home / Products

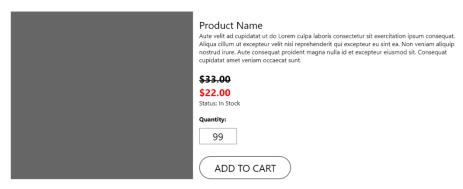

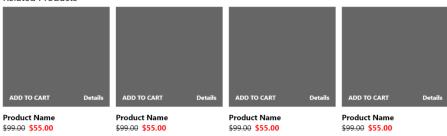

5. This is the product details page. Once you confirm to buy the product, you may select the quantity and click "Add to cart" button. The selected item will be added to your shopping cart.

Home / Products / Product Details

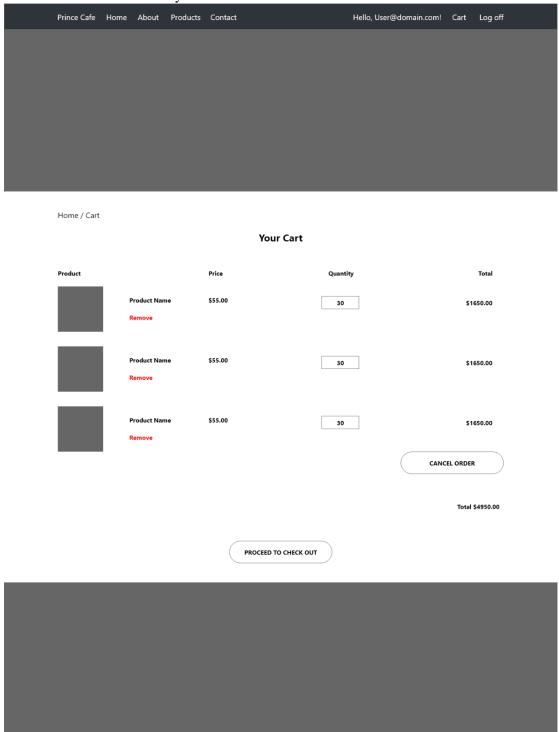

Related Products

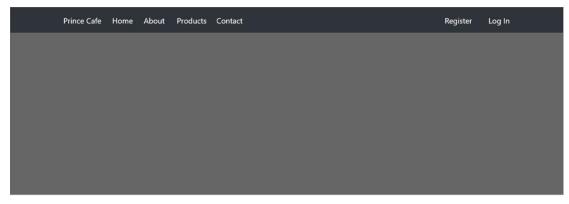

6. You can update the quantity of the product in your shopping cart. The total price will be updated immediately. You also can remove unwanted items. Once the order is confirmed, you can click the "Proceed to check out" button. You are required to choose to dine in or take away.

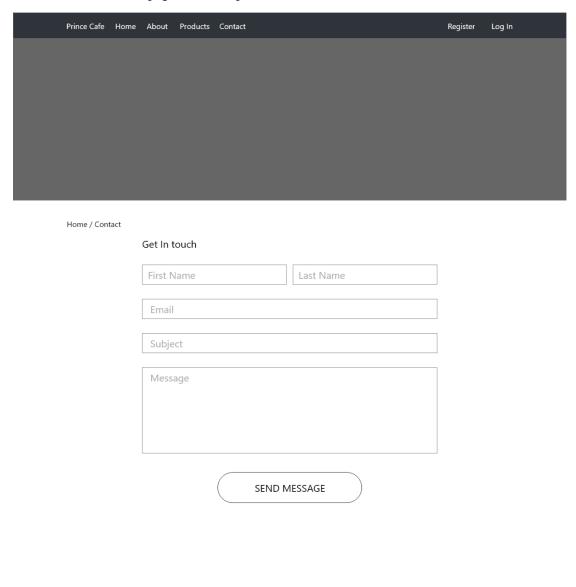

7. This is the about us page.

6 RESTful API

API request by using **POST**, **PUT** and **DELETE** methods are required to request with verification token to prevent **CSRF** (Cross-site request forgery).

6.1 Product API

/api/product GET

List all products

Response

```
"products": [{
    "product_id": 21,
     "product_name": "Caffè Misto",
    "product_description": "A one-to-
one mix of fresh brewed coffee and steamed milk add up to one distinctly delicious coffee drink.",
    "category_id": 2,
     "category_name": "Drink",
    "price": "$33.00",
    "discounted_price": "$22.00",
    "stock": 30,
    "file_path": "/Uploads/file_20191211060500.jpg",
    "discount": true,
    "last_modifited_at": "Wednesday, December 11, 2019 18:05:00"
  }, {
     "product_id": 20,
     "product_name": "Caffè Mocha",
    "product_description": "Espresso combined with mocha syrup and steamed milk, topped with
whipped cream.",
    "category_id": 2,
    "category_name": "Drink",
    "price": "$60.00",
    "discounted_price": "$55.00",
    "stock": 60,
    "file_path": "/Uploads/file_20191211060409.jpg",
    "discount": true,
    "last_modifited_at": "Wednesday, December 11, 2019 18:04:09"
```

/api/product/:id GET

List a product by id

Response

```
{
  "product": {
     "id": 9,
     "is_publish": "Yes",
     "name": "Christmas Tree Brownie",
     "description": "Chocolate brownie with a layer of chocolate buttercream and finished with a s
prinkling of gold dust",
     "category": "Food",
     "price": "$80.00",
     "discounted_price": "$70.00",
     "sales_period_start": "2019-11-11",
     "sales_period_end": "2023-11-11",
     "stock": 30,
     "file_path": "/Uploads/file_20191212104830.jpg"
}
```

/api/product POST

Create a product

Parameters

Parameter Name	Data Type
ProductName	String
ProductDescription	String
CategoryID	Integer
Price	Decimal
DiscountedPrice	Decimal
SalesPeriodStartAt	DateTime
SalesPeriodEndAt	DateTime
StockQuantity	Integer
Thumbnail	String
IsPublish	Integer
requestverificationtoken	String

Response

"Message": "Record has been created."

/api/product/:id PUT

Update a product by id

Parameters

Parameter Name	Data Type
ProductName	String
ProductDescription	String
CategoryID	Integer
Price	Decimal
DiscountedPrice	Decimal
SalesPeriodStartAt	DateTime
SalesPeriodEndAt	DateTime
StockQuantity	Integer
Thumbnail	String
IsPublish	Integer
requestverificationtoken	String
Response	

"Message": "Record with ID :id has been updated."

/api/product/:id Delete

Delete a product by id

Parameters

Parameter Name	Data Type
id	Integer
requestverificationtoken	String

Response

```
{
    "Message": "Record with ID :id has been deleted."
}
```

6.2 Order API

/api/order GET

List all orders

Response

```
"orders": [{
  "invoice_no": 4,
  "order_no": 4,
  "order_datetime": "Thursday, January 9, 2020 13:05:46",
  "order_status": "CHECKOUT",
  "total_amount": "$160.00",
  "delivery_type": "Dinn In",
  "table_no": 4
}, {
  "invoice_no": 2,
  "order_no": 2,
  "order_datetime": "Thursday, December 12, 2019 00:08:49",
  "order_status": "CHECKOUT",
  "total_amount": "$55.00",
  "delivery_type": "Dinn In",
  "table_no": 5
```

/api/order/:id GET

List an order by id

Response

```
"orderedItems": [{
    "category": "Drink",
    "item_id": 4,
    "product_id": 20,
    "product_name": "Caffè Mocha",
    "product_description": "Espresso combined with mocha syrup and steamed milk, topped with
whipped cream.",
    "price": "$55.00",
    "sub_total": "$110.00",
    "file_path": "/Uploads/file_20191211060409.jpg",
    "quantity": 2,
    "stock": 59
  }, {
    "category": "Drink",
    "item_id": 5,
    "product_id": 15,
    "product_name": "Cappuccino",
    "product_description": "Dark, rich espresso combined with steamed milk, topped with a deep
layer of foam.",
    "price": "$50.00",
    "sub_total": "$50.00",
    "file_path": "/Uploads/file_20191211055853.jpg",
    "quantity": 1,
    "stock": 79
 }],
 "totalAmount": "$160.00",
 "orderId": 4,
 "firstName": "Jennifer",
 "lastName": "Mak",
 "email": "jennifer@gmail.com",
 "phoneNumber": "99956789",
 "deliveryType": "dinn_in",
 "tableNo": 4,
 "orderDate": "Thursday, January 9, 2020 13:05:46"
```

/api/order POST

Create an order and add ordered items to the order

Parameters

Parameter Name	Data Type
ProductID	Integer
Quantity	Integer
RequestVerificationToken	String

Response

```
"Message": "The product has been added to the shopping cart."
```

/api/order/:id PUT

Update an order by id

Parameters

Parameter Name	Data Type
ItemID	Integer
Quantity	Integer
RequestVerificationToken	String

Response

```
{
    "Status": "SUCCESS",
    "Message": "Record has been updated."
}
```

/api/order DELETE

Cancel current order

Parameters

Parameter Name	Data Type	
ItemID	Integer	
RequestVerificationToken	String	
Response		

```
{
    "Status": "SUCCESS",
    "Message": "Your order has been cancelled."
}
```

6.3 Contact API

/api/contact GET

List all feedbacks from users

Response

```
{
  "IsEmpty": false,
  "Records": [{
      "subject": "Hello World",
      "first_name": "Peter",
      "last_name": "Wong",
      "email": "peter@gmail.com",
      "message": "This is the message",
      "date": "Sunday, January 5, 2020 13:21:39"
  }]
}
```

/api/contact/:id GET

List a feedback by id

Response

```
"contact": {
    "ID": 1,
    "FirstName": "Peter",
    "LastName": "Wong",
    "Email": "peter@gmail.com",
    "Subject": "Hello World",
    "Message": "This is the message",
    "CreatedAt": "\Date(1578201699373)\\",
    "LastModifiedAt": "\Date(1578201699373)\\",
    "UserID": "15b4fdf8-27f2-43ed-a56e-98897acc1fab"
}
```

/api/contact POST

Create a feedback

Parameters

Parameter Name	Data Type
FirstName	String
LastName	String
Email	String
Subject	String
Message	String

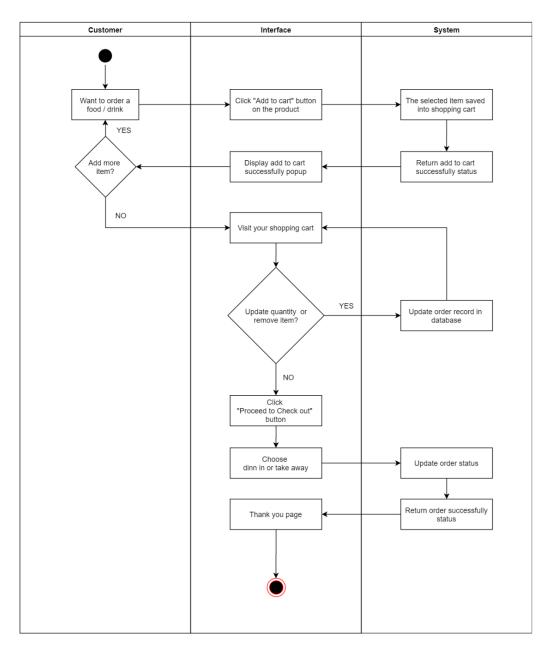

Response

"Message": "Record has been created."

10 Web Accessibility

10.1 Tools for Web Accessibility Audit

For this course work, I decided to use Lighthouse to audit the Web Accessibility. Lighthouse is an open-source tool built in Google Chrome for improving the quality of web application such as performance, accessibility, progressive web apps, SEO and more.

10.2 Audit Result

Accessibility

These checks highlight opportunities to <u>improve the accessibility of your web app</u>. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

10.3 Audit Items

Passed audits (16)	^
• [aria-*] attributes match their roles	~
• [aria-*] attributes have valid values	~
• [aria-*] attributes are valid and not misspelled	~
